## The Oil-Electric Locomotive Has None of the Expensive Habits of the Steam Locomotive

SMOKE

COALING

ASH HANDLING

It may be operated at a fuel cost of  $1/3$  to  $1/6$  that of an equivalent steam locomotive. There are no standby losses.

It requires very little water, and, therefore, eliminates costly watering stations and the high boiler maintenance traceable to bad water conditions.

For small branch lines and congested city yards, it makes possible the elimination of coaling plants, ash pits, turntables, expensive roundhouses, and hostling service—all required for steam locomotives.

Its availability for service is approximately 80%, or double that of a steam locomotive.

Its cost of maintenance is approximately one-half that of an equivalent steam locomotive.

It provides higher tractive effort at starting and low speeds.

In operation it is practically noiseless and smokeless.

Its oil engine can be loaded full at all speeds—a factor which aids in maintaining fuel economy.

*Ingersoll-Rand oil-electric locomotives are now used successfully by many of the country's leading railroads and industrial plants.*

## Modern Industry Rolls on Timkens

New high standards of precision and production; new low levels of manufacturing costs. These are the direct benefits to every type of machinery made possible by Timken Bearings. These are the advantages which student engineers of today will be expected to provide tomorrow.

Small wonder that such sweeping results have carried Timken to the very top as a dominant factor in leading industries.

In the very toughest jobs of all, machine tool spindles, Timken Bearings are rolling up close to the 100% mark on all the new anti-friction machines for heavy-duty production.

Go through all Industry with a fine-tooth comb. You will find *Timken* the one bearing—and the one name that stands out above all others.

This is evidence of the most compelling character of the superiority to be had only with Timken tapered construction, Timken positively aligned rolls and Timken-made steel.

These cost-shrinking, profit-expanding advancements will be just as easy to obtain in the future as they are now... in any type of machinery you may be called upon to design or buy... through "Timken Bearing Equipped." The Timken Roller Bearing Company, Canton, Ohio.

# Smith-mixed Concrete

## *for Milwaukee County Court House*

### KOEHRING

Pavers, Mixers; Power Shovels,  
Pull Shovels, Cranes, Draglines;  
Dumpsters.

### INSLEY

Excavators; Concrete Placing  
Equipment; Cars, Buckets,  
Derricks.

### T. L. SMITH

Tilting and Non-tilting Mixers,  
Pavers, Weigh-Mix.

### PARSONS

Trenchers, Backfillers.

### C. H. & E.

Portable Saw Rigs, Pumps,  
Hoists, Material Elevators,  
Ditchers.

### KWIK-MIX

Mixers — Concrete, Plaster and  
Mortar.

"Concrete—Its Man-  
ufacture and Use," a  
complete treatise and  
handbook on present  
methods of preparing  
and handling concrete,  
and cement concrete,  
will be gladly sent  
on request to engi-  
neering students, fac-  
ulty members and  
others interested.

One of the largest county court houses in the United States is nearing completion at Milwaukee, Wisconsin. This new eight million dollar building of classical architecture takes an imposing position on its raised elevation.

General dimensions show a length of 450 feet, a width of 200 feet and a height of 200 feet. In the foundation, 6,700 piles were sunk in order to provide a secure base for the heavy structure. There were 12,000 tons of steel used in the building and the limestone order, which was third largest placed in the United States during 1929, amounted to 303,000 cubic feet. The six columns over the entrance are 7 ft. 6 in. in diameter and are 60 ft. high.

Among the N. E. C. machines used on the Milwaukee County Court House was a large Smith Tilting Mixer of 2 yard capacity. With the famous Smith end-to-center mixing action, the big tilter mixed 10,000 cubic yards of concrete—Smith-mixed concrete for permanence.
